

ANWEST CONSTRUCTIONS

A multi-site builder, kept in sync across every job.

Lauren, Admin Manager, has been the client contact for the entire decade.

INDUSTRY

Commercial construction

LOCATION

Bayswater, Western Australia

TENURE

Since 2016

WEBSITE

www.anwest.com.au

THE STACK

Azure Virtual Desktop (single-tenant)

M365 hardened tenant

Site-to-site secure links into remote builds

Acronis Cyber Protect (immutable, AU-resident)

Intune device compliance

ANWEST Constructions, head-officed in Bayswater in Perth's inner north-east, has been on whedo.it's books for a decade. The firm delivers residential and commercial projects across Western Australia, including major collaborations with institutions such as Curtin University — the kind of multi-site builder where the operations team is constantly running concurrent jobs across the state from a head-office anchor.

When ANWEST first came across, the operational pain was familiar to anyone who's run a multi-site builder: drawings out of date the moment they were emailed, RFIs lost between cabin and HQ, version control devolving into a folder full of dated PDFs, and a VPN that worked when the wind was blowing the right way.

whedo.it built ANWEST a single-tenant Azure Virtual Desktop environment with Australian data residency, secure site-to-site links into every remote office, and central file governance — so a foreman at a regional site is looking at the same drawing as the project manager at HQ, in real time. Identity is M365-native with conditional access, MFA, and Intune device compliance across every laptop and tablet. Backup and recovery in place — immutable copies, off-site, AU-resident, rehearsed restores on a documented cadence.

The visible benefit is speed: drawing changes propagate the moment they're saved, and the field doesn't wait for the office. The invisible benefit is operational continuity. In ten years: no migration weekends, no major outages, no "we'll have to call the vendor and get back to you. Staff being able to work from home via secure Remote Desktop. Latest hardware builds and software for a demanding high energy business, that requires zero downtime

Lauren, ANWEST's Admin Manager, has been whedo.it's contact for the entire engagement — the same person on the other end of the call for ten years.

“

Warren rolled this out seamlessly across all our remote site Offices.

LAUREN — ADMIN MANAGER, ANWEST CONSTRUCTIONS
