THE STACK

Azure Virtual Desktop — Published Apps

Nerdio Manager Enterprise

M365 hardened tenant

Privileged Identity Management

Acronis Cyber Protect

Professional Cost Consultants International — PCC — is a specialist project-services practice formed in 1995. Estimating, estimate validation, commercial management, procurement, cost administration, cost control and planning, delivered into large-scale mining, engineering, petrochemical, infrastructure and commercial-construction projects globally. PCC isn't an engineering generalist with cost-consulting bolted on; from inception it has only ever done these things, which is why tier-one mining and infrastructure clients keep it embedded in their project teams from feasibility through commissioning.

From a founding office in South Africa, whedo.it now runs out of strategic hubs in Australia, Canada, the Middle East and Africa. The Australian entity sits at Level 1, 89 St Georges Terrace in Perth — and whedo.it is its IT partner end-to-end. The complete Australian environment, all of it, all the time.

The architecture is Azure Virtual Desktop with Published Apps as the delivery model. Cost engineers, estimators, planners and commercial managers don't see a desktop in the cloud — they see the specific apps their role needs, delivered cleanly into their local session. Estimating software, document control, project finance, M365: licensing right-sized per role, performance predictable per app, onboarding a new staff member a matter of assigning a group rather than building a workstation. Field-deployed engineers on mine sites get the same office experience as the Perth team.

Identity sits on a hardened M365 tenant: conditional access, MFA, Intune device compliance, and Privileged Identity Management in place by default rather than bolted on after an incident. Nerdio Manager Enterprise handles AVD orchestration — auto-scaling host pools, intelligent shutdowns, image lifecycle by policy. Costs stay anchored. Capacity flexes with the working day. Acronis Cyber Protect backs the full estate — immutable, off-site, AU-resident, rehearsed restores — including independent backup of the M365 mailboxes, Teams, SharePoint and OneDrive, because Microsoft's retention is not a backup strategy for an organisation handing tier-one mining clients commercial-in-confidence project numbers.

Multi-year, continuous, no rebuilds. PCC is the kind of engagement where the IT function is judged by what it doesn't do — show up as a problem — and whedo.it has, for the length of the relationship, met that brief.

“

Whedo.it runs the complete Australian IT environment for Professional Cost Consultants International — a multi-year continuous engagement covering AVD Published Apps, M365 governance, identity hardening, and Acronis backup and recovery.
