

PERTH SURVEYING (X3)

Three Perth surveyors. Quietly kept running.

McCallum Surveys, Premium Surveys and Precise Surveys — same trusted email-and-remote-support relationship across all three fleets.

INDUSTRY

Land & engineering surveying

LOCATION

Perth, Western Australia

TENURE

Long-tenure across all three firms

WEBSITE

Available on request

THE STACK

Microsoft 365 email & identity

Fleet-wide remote support (Zoho Assist)

Fleet endpoint coverage

Acronis Cyber Protect (where in scope)

Same SLA across all three firms

Three of Western Australia's working surveying practices — McCallum Surveys (Balcatta), Premium Surveys (Applecross) and Precise Surveys (Balcatta) — sit on the same trusted email-and-remote-support relationship with whedo.it. Different firms, different specialities, the same quiet IT spine underneath.

McCallum Surveys, led by Paul, is one of WA's larger engineering-survey teams, with major-project credentials including the Mitchell Freeway Extension, the Denmark Albany Pipeline, and the Western Power South-Metro Depot. They run aerial, engineering, land-development, laser-scanning, mining and UAV LiDAR work for tier-one contractors including ADCO, Acciona, Georgiou and BOS Civil. Premium Surveys, founded in 2021 by Director Gary and based in Applecross, focuses on mining and civil infrastructure — earthworks, concrete, SMP, drone and laser scanning across sites such as Binduli, Mt Ida and West Musgrave gold mines and the Tanami Road Upgrade in the NT. Precise Surveys, founded by director Chris, using Terrestrial Laser scanners which are becoming increasingly popular for their many benefits and use cases when applied to the construction and engineering industry. Precise Surveys are one of WA's industry leaders in using Unmanned Aerial Vehicles (UAV's) to provide a variety of solutions to meet their clients needs. Their professional team has years of traditional survey experience, and rely on whedo.it to keep all the wheels turning securely

The architecture is purpose-fit for the brief: Microsoft 365 email and identity at the centre, fleet-wide remote support through Remote Assist for sub-five-minute response on the desktop, and a managed cadence around the workstation fleets — updates, security baselines, account hygiene. Acronis Cyber Protect is in scope where backup falls under the engagement. When something breaks, the same senior engineer is on the call — not a tier-one queue. When the firms have asked for a quote on something heavier — a larger AVD cutover, a security uplift, a hardware refresh — the conversation has been with someone who already knows their environment.

The three firms exemplify what whedo.it's book looks like at the working end: long-tenure, no drama, an MSP kept on retainer, and a fleet of working professionals who don't have to think about IT during a billable day. References available to qualified prospects on request from any of the three principals.

“

Three Perth surveying firms, one trusted email-and-remote-support relationship — the kind of quietly competent practitioner relationship that doesn't make the brochure but defines the working day.
